## Creepy Critters

Get a set of Creepy Critters from your teacher. Organize them into groups, then answer the following questions.

1. What groups did you put the organisms into? (Describe based on what they have in common.)

2. Was one characteristic more important in deciding which group an organism went into?

3. What happened when the new organisms were discovered? (Tell whether they went into a group you already have or if you had to rearrange and make new groups.)

4. Why would we want to put organisms together in a group?

5. How do scientists decide which organisms go together in a group?

6. If you put living things into groups, what groups would you make?
