

## Evolution Vocabulary

### I. Make vocabulary flips of the following words:

Evolution - change over time

Natural selection - Darwin's idea nature selects the best traits

Common Ancestor - relative shared by 2 or more organisms

Adaptation - a trait that helps an organism survive

Overproduction – living things have too many offspring

Variation - a lot of variety in living things

Vestigial structure - a body part that was once useful

Anatomy - the structure of a living thing

Resources - all the things an organism needs to live

- Take a normal lined paper. Fold the top to the bottom. Fold top to bottom again.
- Cut into 4 flip books.
- Write the word on the outer flap, definition on the glued down flap and a picture of the backside of the word.
- These go in the notebook on page 54 (Evolution Vocabulary)
