

Characteristics of Living Things Posters

Remember the 6 characteristics (things that are true) of all living things!

1. Are made of cells
2. Respond to changes in their environment (stimuli)
3. Reproduce and die
4. Have DNA (genetic material)
5. Use energy
6. Grow and develop

You will make a poster that has 6 areas (for the 6 characteristics). Each area needs to be labeled and have at least 2 pictures that show that characteristic. They can be cut out of a magazine or drawn. Make sure to write the title (Characteristics of Living Things) at the top, your names, the date and the period. Remember to make your sections and pictures neat and clear.
